Spread with confidence (6.5 point differential)

4-6

— National Championship —

Once TCU beat Michigan and UGA beat OSU, I added the new data to the model . It said Georgia would win by 3. Sadly, this was another confidence pick because the line was 13.5 points in favor of UGA. They went up 38-0 in the first half, and that was further confirmation that the model was broken. Luckily by that point, I had quit putting money on the model because I put a sizable bet on UGA to cover and ironically, to have over 37.5 points, too. What's more discouraging is that when the model was confident, it did worse.
