Lab 3 Report

Question 1:

— None —

Question 2:

Personally, I think all of them are acceptable except for the smokey images. The k = 4 image for smokey is the worst of them all. I can nitpick the other ones: the trees in front merge into the building in front of Ayres. Obviously, the clouds detail is gone for each image when k = 4. The Power T showing through the both the smokey and checker Neyland picture is surprising. Maybe, it means that we will beat Bama.
